

MUNIS Software

Some Advantages/Improvements over Northern Data Systems

- Support from NDS has reached a new low. Feedback from our peers indicates a positive experience with MUNIS.
- An extensive suite of modules that integrate seamlessly.
- Ability to import data from MyGov, putting off the need to initially purchase this module. The same applies in Assessing: the Vision software we are using imports smoothly into MUNIS.
- Departments would enter payroll hours directly – the information would be transmitted to Liz in Payroll for *review*, rather than having her re-enter it. Reduces duplicate data entry.
- Departments enter their purchase requests, and route the purchase order electronically for approval. Real-time general ledger budget checks ensure the availability of funds.
- When viewing account activity, department heads and designees can “drill down” on any entry to obtain more detailed information. Currently there is no ability to delve beyond the number displayed.
- An extensive array of reporting capabilities. There are hundreds of standard reports, with the ability to customize them to our needs. Virtually all reports can be downloaded to EXCEL for further formatting and analysis.
- In Human Resources, we maintain nearly all employee information on *unlinked* spreadsheets. With MUNIS, all employee data such as anniversary dates, insurance coverages, and scheduled pay raises is housed under one umbrella. Unique data would be entered *once*. Reminders can be set so that due dates for various events won’t be overlooked.
- Tyler Technologies is constantly enhancing the product. The software will grow with our needs.
