

Watershed Inventory Table - DRAFT

Cover Sheet

Impairment Codes	
Category 1	Attaining all designated uses and water quality standards, and no use is threatened.
Category 2	Attains some of the designated uses; no use is threatened; and insufficient data or no data and information is available to determine if the remaining uses are attained or threatened (with presumption that all uses are attained).
Category 3	Insufficient data and information to determine if designated uses are attained (with presumption that one or more uses may be impaired).
Category 4	Impaired or threatened for one or more designated uses, but does not require development of a TMDL.
Category 4-A	TMDL is completed. A TMDL is complete but insufficient new data exists to determine that attainment has been achieved.
Category 4-B	Other pollution control requirements are reasonably expected to result in attainment of standards in the near future.
Category 4-C	Impairment is not caused by a pollutant.
Category 5	Waters impaired or threatened for one or more designated uses by a pollutant(s) and a TMDL is required.
Category 5-A	Impairment caused by pollutants (other than those listed in 5-B through 5-D). A Total Maximum Daily Load is required and will be conducted by the State of Maine.
Category 5-B	Impairment is caused solely by bacteria contamination. A TMDL is required.
Category 5-C	Impairment caused by atmospheric deposition of mercury. A regional TMDL is required.
Category 5-D	Impairment caused by a “legacy” pollutant.

Source: DEP's 2016 Integrated Water Quality Monitoring and Assessment Report

Water Classifications	
Class AA Waters	Managed for their outstanding natural ecological, recreational, social, and scenic qualities. Direct discharge of pollutants is allowed but highly restricted. Dams and other significant human disturbances are prohibited.
Class A Waters	Managed for high quality with limited human disturbance allowed. Direct discharges are allowed but highly restricted. Physical and chemical characteristics should be similar to natural conditions.
Class B Waters	General-purpose waters and are managed to attain good physical, chemical and biological water quality. Well-treated discharges with ample dilution are allowed.
Class C Waters	Managed to attain at least the swimmable-fishable goals of the Federal CWA, including support of indigenous fish species. Aquatic life standards require maintenance of the structure and function of the biological community.

Lakes Most at Risk from New Development & Urban Impaired Streams Criteria (DEP Chapter 502)	
Lakes Most at Risk from New Development	A lake is considered most at risk from new development if it is a public water supply, or has been identified by the department as being in violation of class GPA water quality standards or as particularly sensitive to eutrophication.
Urban Impaired Stream	A stream is considered impaired if it fails to meet water quality standards because of effects of stormwater runoff from developed land.

Source: DEP's Chapter 502: DIRECT WATERSHEDS OF LAKES MOST AT RISK FROM NEW DEVELOPMENT, AND URBAN IMPAIRED STREAMS (December 27, 2006)

Maine DEP - Nonpoint Source (NPS) Priority Watersheds	
Impaired Watersheds	NPS Priority Impaired Watersheds are chosen based on a variety of criteria by DEP. These criteria include impairment categories, TMDL reports, risk factors include development and highway access, growth trends, etc.
Threatened Watersheds	Unimpaired waters that are subject to potential impacts from NPS pollution

Source: DEP's Maine Nonpoint Source Management Program Plan 2015 - 2019 (September 15, 2014)

Watersheds highlighted in green are considered to be in good health (not impaired or threatened).
Watersheds highlighted in yellow are considered to be threatened.
Watersheds highlighted in red are considered to be impaired.
