Subject: temp block wall and interior repairs

Hello all,

I know this is very important so we worked out estimates for both projects:

To purchase and install 90 concrete yard blocks along the back side of the salt shed:
30' on each end two deep and two high
60' with two deep, two high on outer row and three high on inner row

The cost is \$25,562.00

To repair the foundation walls above and below, install bar, place new 14" thick wall, backfill with flowable fill. We did not include the re-pave patch because we thought the Town could do easy.

The cost is \$137,625.00
