

Forest Lake Association  
2018 Windham Grant Recipient  
Final Report  
January 15, 2019

Forest Lake Association continues to work towards lake health and water quality by preventing soil run off from dirt surfaced roads. One of the largest sources of soil / phosphorus run off is on the portion of Lakeside Drive on the western edge of Forest lake located in Windham township.

In the 2018 summer we worked with Cumberland County Soil and Water District engineers to have site visits at the 5 most high risk sites for soil erosion on Lakeside Drive. Engineers then made a complete report and recommendations to fix these sites.

These recommendations were completed in August 2018. Road association presidents will continue to engage engineers to complete these projects in summer of 2019. Remaining monies from the 2018 grant are earmarked for this project.

Thank you for your continuing willingness to assist Forest Lake Association in these efforts to keep our lakes pure.

Janene Gorham  
President , Forest Lake Association
