**RE: Tax Map and Lot # 036049000000  
Survey Site # 1-01**

Friends of Forest Lake,

Earlier this year, the Forest Lake Association (FLA) worked directly with the Maine Department of Environmental Protection (DEP), Cumberland County Soil & Water Conservation District (CCS&WCD), technical leaders from a variety of organizations, and resident volunteers to complete a survey of the Forest Lake watershed. Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 68 Forest Ave. More specifically:

- ☐ **Soil: Bare**
- ☐ **Surface Erosion: Sheet**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

**The primary goals of the 2017 Forest Lake Watershed Survey are to:**

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

Friends of Forest Lake,

Earlier this year, the Forest Lake Association (FLA) worked directly with the Maine Department of Environmental Protection (DEP), Cumberland County Soil & Water Conservation District (CCS&WCD), technical leaders from a variety of organizations, and resident volunteers to complete a survey of the Forest Lake watershed. Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 32 Forest Ave. More specifically:

- ☐ **Roof Runoff Erosion**
- ☐ **Soil: Bare**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

**The primary goals of the 2017 Forest Lake Watershed Survey are to:**

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 39 Forest Lane. More specifically:

- ☐ **Roof Runoff Erosion**
- ☐ **Surface Erosion: Sheet**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

**The primary goals of the 2017 Forest Lake Watershed Survey are to:**

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

- ☐ **Soil: Bare**
- ☐ **Surface Erosion: Sheet**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

**The primary goals of the 2017 Forest Lake Watershed Survey are to:**

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

Survey Site # 3-01**

Friends of Forest Lake,

Earlier this year, the Forest Lake Association (FLA) worked directly with the Maine Department of Environmental Protection (DEP), Cumberland County Soil & Water Conservation District (CCS&WCD), technical leaders from a variety of organizations, and resident volunteers to complete a survey of the Forest Lake watershed. Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at Small Dam Rd. More specifically:

**☐ Surface Erosion: Sheet**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 14 Larrabee Ln??. More specifically:

- ☐ **Ditch: Rill Erosion**
- ☐ **Soil: Winter Sand**
- ☐ **Surface Erosion: Rill**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

**The primary goals of the 2017 Forest Lake Watershed Survey are to:**

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

FOREST LAKE PROPERTIES, LLC —  
63 HARDING RD  
GORHAM ME 4038

**RE: Tax Map and Lot # 072-202-037-000  
Survey Site # 3-08**

Friends of Forest Lake,

Earlier this year, the Forest Lake Association (FLA) worked directly with the Maine Department of Environmental Protection (DEP), Cumberland County Soil & Water Conservation District (CCS&WCD), technical leaders from a variety of organizations, and resident volunteers to complete a survey of the Forest Lake watershed. Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 21 Larrabee Ln. More specifically:

- ☐ **Roof Runoff Erosion**
- ☐ **Shoreline: Lack of Shoreline Vegetation**
- ☐ **Soil: Bare**
- ☐ **Surface Erosion: Rill**
- ☐ **Surface Erosion: Sheet**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 99 Cottage Rd. More specifically:

**☐ Surface Erosion: Rill**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

**The primary goals of the 2017 Forest Lake Watershed Survey are to:**

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

November 2017

HAMILTON, ELIZABETH A HAMILTON, RANDALL D

BRUNSWICK ME 4011

**RE: Tax Map and Lot # 074-203-003-000  
Survey Site # 4-02**

Friends of Forest Lake,

Earlier this year, the Forest Lake Association (FLA) worked directly with the Maine Department of Environmental Protection (DEP), Cumberland County Soil & Water Conservation District (CCS&WCD), technical leaders from a variety of organizations, and resident volunteers to complete a survey of the Forest Lake watershed. Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 117 Cottage Road. More specifically:

- ☐ **Shoreline: Erosion**
- ☐ **Shoreline: Inadequate Shoreline Vegetation**
- ☐ **Soil: Bare**
- ☐ **Surface Erosion: Gully**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

### The primary goals of the 2017 Forest Lake Watershed Survey are to:

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

TAYLOR, KAREN D —  
116 PENNSYLVANIA AVE  
SO PORTLAND ME 4106

**RE: Tax Map and Lot # 074-203-028-000  
Survey Site # 4-10**

Friends of Forest Lake,

Earlier this year, the Forest Lake Association (FLA) worked directly with the Maine Department of Environmental Protection (DEP), Cumberland County Soil & Water Conservation District (CCS&WCD), technical leaders from a variety of organizations, and resident volunteers to complete a survey of the Forest Lake watershed. Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at 167 Cottage Rd. More specifically:

**☐ Surface Erosion: Gully**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.

Thanks in advance for being a good steward of Forest Lake! Sincerely,

Forest Lake Association  
2017 Watershed Survey Steering Committee

**The primary goals of the 2017 Forest Lake Watershed Survey are to:**

- Identify and prioritize existing sources of polluted runoff, particularly soil erosion sites, in the Forest Lake Watershed.
- Raise public awareness about the connection between land use and water quality, and the impact of soil erosion on Forest Lake.
- Inspire people to become active watershed stewards.
- Provide the basis to obtain additional funds to assist in fixing identified erosion sites.
- Make general recommendations to landowners for fixing erosion problems on their properties.
- Use the information gathered as one component of a long term lake protection strategy.

*Every effort was made to assure that these follow-up letters were sent to the correct property owners. If, however, the site description does not seem to fit with your property, please let us know as soon as possible. However, even if your site has no issues identified in the report, you may still find useful tips to reduce soil transport off your property.*

**RE: Tax Map and Lot # 017025000000  
Survey Site # 5-01**

Friends of Forest Lake,

Earlier this year, the Forest Lake Association (FLA) worked directly with the Maine Department of Environmental Protection (DEP), Cumberland County Soil & Water Conservation District (CCS&WCD), technical leaders from a variety of organizations, and resident volunteers to complete a survey of the Forest Lake watershed. Our 2017 survey supplements and enhances findings from an earlier 2003 survey, identifies new potential sources of runoff pollution, and informs planning for the continued protection of Forest Lake water quality.

During the survey period, teams of volunteers and trained technical leaders visited each and every participating property in the watershed. For sites with erosion concerns, issues and possible mitigation strategies were noted. All data was then compiled into a Watershed Survey report that is now available at:

<http://www.forestlakeme.org/2017-forest-lake-watershed-survey-report/>

While we hope that you have the opportunity to review the full report, this letter is an opportunity to call your attention to one or more erosion sites on your property at Cypress Hill Dr. More specifically:

- ☐ **Soil: Winter Sand**
- ☐ **Surface Erosion: Gully**

Though you are NOT required to provide remedies, we know that most Forest Lake watershed property owners interested in to preventing water quality deterioration. By mitigating issues now, you will help protect property values and water quality while reducing the threat of invasive plant species.

Included with this letter are specific recommendations that address the issues identified and supporting Fact Sheets for remediation. It is our sincere hope that you will consider the importance of the Pond to your life and your property, read the materials and make recommended improvements. Many improvements will be simple things you can do to reduce sedimentation entering the Pond. For larger concerns, you may also get advice and/or help from Maine DEP and/or Cumberland County Soil & Water Conservation District.

The steering committee hopes that you will think about your own role in protecting the lake, and then try some of the recommended conservation measures.

FLA is taking steps to position the watershed community for positive action to protect the lake. We are working directly with CCS&WCD to develop a watershed conservation plan and will seek grant funding in 2018 to help with remedial efforts.
